AT&T PETITION FOR WAIVER

I. INTRODUCTION

Pursuant to Section 1.3 of the Commission’s rules,¹ AT&T Services, Inc., on behalf of itself and its affiliates, hereby requests a limited waiver from the default NG911 Phase 1 implementation timelines in Section 9.30 (a)(1) of the Commission’s rules² for its legacy TDM incumbent local exchange carrier (ILEC) and competitive local exchange carrier (CLEC) (collectively, “Wireline”) services (Waiver Petition). As set forth in Attachment A, AT&T requests until September 30, 2026, or February 28, 2027, depending on the jurisdiction, to implement NG911 for its legacy Wireline services.

AT&T is committed to the transition to NG911. As an originating service provider (OSP), AT&T has been working diligently to implement NG911 requests in compliance with the Commission’s six-month default timeline after receipt of a valid request.³ This has required AT&T to apply various solutions across its numerous platforms, including wireless, business

¹ 47 C.F.R. §1.3.

² 47 C.F.R. §9.30(a)(1).

³ *Id.*

voice over IP (BVoIP), consumer voice over IP (CVoIP), AT&T Phone – Advanced (APA), AT&T Phone Business – Advanced (APB-A), legacy Wireline ILEC and CLEC services.

AT&T has implemented NG911 Phase 1 requests from 911 Authorities representing the vast majority of AT&T's traffic as an originating service provider. As of August 28, 2026, AT&T has completed valid Phase 1 NG911 requests for its wireless service for 199 911 Authorities covering 1643 Public Safety Answering Points (PSAPs) in 22 states.⁴ Where applicable, AT&T has also completed requests from NG911 Authorities for its other services -- BVoIP (1,496 PSAPs), CVoIP (1,548 PSAPs), AP-A (886 PSAPs) and APB-A (1,548 PSAPs). However, as described further below, AT&T has encountered and continues to work through technical and/or operational challenges to deploy Phase 1 NG911 for its legacy Wireline services.

AT&T has proactively contacted each 911 Authority included in this Waiver Petition on multiple occasions, including over the past few weeks. The purpose of this outreach was to explain the difficulties AT&T has encountered in implementing NG911 for its legacy Wireline service, request an extension of the NG911 Phase 1 deadline and, in the most recent outreach, explain that AT&T would be filing this Waiver Petition. While our outreach continues, this Waiver Petition includes those 911 Authorities that have not agreed to an extension for the time period that AT&T estimates is needed to complete its NG911 Phase 1 implementation but does not include any 911 Authority with whom it is actively engaged in extension discussions or the 911 Authority has indicated a further extension of time may be granted in the future.⁵

⁴ The NG911 Authorities include PSAPs in Alabama, Arkansas, Florida, Georgia, Idaho, Illinois, Indiana, Kansas, Louisiana, Maryland, Minnesota, Missouri, Nevada, New Hampshire, North Dakota, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia, Wisconsin.

⁵ If AT&T reaches a mutually agreeable extension or implements NG911 before the requested deadline, it may seek to withdraw that 911 Authority from this Waiver Petition.

II. AT&T REQUESTS A LIMITED TIME WAIVER TO DEPLOY PHASE 1 NG911 FOR ITS LEGACY WIRELINE SERVICE

Deploying Phase 1 for its legacy Wirelines service with the solution AT&T chose has proven to be more difficult than anticipated as automatic location identification (ALI) must be obtained from antiquated systems or directly from its customers in the case of legacy Wireline multi-line telephone service (MLTS) customers.

A. Obstacles Encountered in Extracting Data for Its NG911 Phase 1 Solution

AT&T contracted with Intrado to use its NG Nexus solution to support Phase 1 and 2 NG911 for AT&T's legacy Wireline service. Intrado is the country's largest provider of NG911 services and has deployed Phase 1 Session Initiated Protocol ("SIP") connectivity to over 3,300 Public Safety Answering Points (PSAPs).⁶ AT&T chose the Intrado solution as it would be able to support both Phase 1 and Phase 2 NG911 call delivery across its wireline footprint nationwide until its legacy Wireline services are discontinued.⁷

The Intrado NG Nexus platform was designed with NG911 Phase 2 implementation in mind. As such, it does not query the ALI database for NG911 Phase 1, even though that would otherwise be permissible under the current standards. This has accelerated the need for AT&T, or its vendor, to supply the Telephone Number (TN) and corresponding ALI information to Intrado's NG Nexus platform. Specifically, TN/ALI information must be loaded into a single AT&T database for each of its Wireline services (ILEC and CLEC). These databases then feed

⁶ See *Reply Comments of Intrado Life & Safety, Inc. on Verizon Petition for Waiver*, PS Dockets No. 21-479 and 25-143 (filed May 11, 2026) ("Intrado Response Comments"), p. 1-2.

⁷ See Press Release, AT&T, *AT&T Outlines Strategic Plan to Drive Sustainable Growth and Enhanced Shareholder Returns* (Dec. 3, 2024), <https://about.att.com/story/2024/analyst-and-investor-day-2024.html> ("[AT&T] is actively working to exit its legacy copper network operations across the large majority of its wireline footprint by the end of 2029."). See also, Susan Johnson, Senior Executive Vice President – Transformation and Supply Chain [blog post](#) (April 28, 2026).

the TN/ALI information to the NG Nexus platform. This information must be shared initially with the NG Nexus platform and updated every time there is a change to the TN/ALI, such as when a customer disconnects service or the location changes for that service.

Unfortunately, the seemingly simple task of extracting TN/ALI from AT&T's legacy systems and delivering it to Intrado's NG Nexus platform has proven to be more complicated than originally anticipated. AT&T does not have the official TN/ALI records for PSAPs served by Alternate Emergency Service Providers (AESPs). For each AT&T customer with a TN in an area served by an AESP, the address needed to be retrieved from AT&T's service order system. AT&T's legacy Wireline service is comprised of an amalgamation of purchased companies with pertinent systems for the ILEC information varying by region and the CLEC information is stored in a separate system. Unexpected issues were encountered in extracting the data from these systems. For example, the NG Nexus platform requires zip code information for the ALI, something that was not included in AT&T's legacy ILEC systems, as it was not necessary for AT&T's previous handling of 911 calls. In AT&T's Midwest region, the ILEC encountered difficulty extracting service address information from a system managed by a vendor and had to work with that vendor to implement a solution. After collecting the TN/ALI information and adding the 911 compliant zip code, the information also needed to be validated against the correct Master Street Address Guide (MSAG), which is refreshed daily. Further, secure transmission of this data to the NG Nexus platform had to be addressed for both the initial set-up and ongoing updates to the TN/ALI information.

In addition to resolving the TN/ALI information, AT&T must complete work to implement each 911 Authority's request. For each request, AT&T needs to build facilities, turn up trunks and then conduct testing with Intrado and the PSAP.

B. Lack of Automatic Location Information for Wireline Multi-Line Telephone Systems is Thwarting AT&T's Original Plan for NG911 Implementation

Similar to the situation described in Verizon's Waiver Petition,⁸ AT&T does not have location information for its legacy Wireline customers subscribing to MLTS if the customer uses a third-party vendor for private switch (PS)/ALI updates or makes the ALI updates themselves.

Pursuant to the Commission's RAY BAUMS Act Order, the party that manages or operates the MLTS is responsible for updating the location information associated with the phone number in the ALI as this location may change over time (*e.g.*, a phone number is re-assigned to another floor or a different building on campus). AT&T previously offered multi-line legacy Wireline ILEC customers a service to update the TN/ALI information, but these MLTS customers could instead choose to subscribe to another PS/ALI service or make their own ALI updates. AT&T does not have the TN/ALI information for its MLTS customers that do not subscribe to its PS/ALI service, and these MLTS customers are not required by contract or regulation to provide this information to AT&T.

As discussed above, Intrado's NG Nexus platform requires AT&T to provide TN/ALI information for all of its voice customers, including legacy Wireline MLTS customers, in a single database for each legacy Wireline service (ILEC and CLEC separately) and this ALI information is used to route 911 calls. Lack of location information for any telephone number associated with a 911 call may increase the time for the caller to receive assistance as the call will be routed to Intrado's Emergency Call Relay Center (ECRC) for a telecommunicator to

⁸ See *Facilitating Implementation of Next Generation 911 Services (NG911)*, Massachusetts State 911 Department Request of April 4, 2025, PS Docket No. 21-479, Verizon Petition for Waiver, filed April 17, 2026 ("Verizon Petition").

verbally communicate with the caller to determine the caller's location to route the call to the appropriate 911 service provider and provide a dispatchable location.⁹

As Verizon notes in its waiver petition, this issue is not limited to any particular jurisdiction, and it is an issue that other OSPs with MLTS voice customers may also experience, if those MLTS subscribers are not already providing the TN/ALI information, including any updates, to the OSP.¹⁰

C. AT&T Legacy Wireline Plan for Compliance with NG911 Requests

AT&T understands the importance of implementing Phase 1 and, ultimately, Phase 2 NG 911 and is committed to doing so. As its original plan for implementing Phase 1 for legacy Wireline services encountered unexpected obstacles, AT&T began exploring alternate solutions. Specifically, AT&T is considering utilizing vendors that are already translating TDM calls to SIP format and, in most cases, are already connected to the points of interconnection requested by the 911 Authority in its Phase 1 request. AT&T anticipates that this will expedite its compliance with Phase 1 requests in some jurisdictions while not slowing the ability to meet Phase 2 implementation requests.

AT&T also continues to work through the various technical and/or operational challenges described herein as an alternate solution will not be viable in all locations. In addition, resolving these challenges provides an important foundation for meeting the deadline for Phase 2 NG911 requests. This includes exporting the TN/location information from AT&T's systems as well as gaining visibility into the PS/ALI updates. For the latter, AT&T is identifying all of its MLTS customers for which it does not have TN/location information, developing a mechanism to

⁹ *Verizon Petition* at 7.

¹⁰ *See Verizon Petition*, p. 7, n. 12. AT&T's BVoIP MLTS customers are already required to update TN/ALI information with AT&T.

collect this information (both initially and any updates) utilizing Intrado’s Emergency Routing Service (ERS), and executing a customer outreach and communication plan.

AT&T anticipates that it will be able to meet the compliance deadline for the single Phase 2 request it has received for its legacy Wireline service, which is from the Massachusetts State 911 Department (“Department”), at the same time it complies with Phase 1. As such, the Department’s Phase 2 request is not included in this Waiver Petition. Consistent with the Commission’s NG911 Transition Order, the compliance date for the Department’s Phase 2 request is September 30, 2026, as the default Phase 2 NG911 implementation for an OSP is six months after the later of: (1) the 911 Authority’s Phase 2 valid request; or (2) the date when the OSP is required to comply with Phase 1 requirements, or when it does comply with those requirements (whichever is earlier).¹¹ As the Commission explains, “compliance with Phase 1 requirements is a prerequisite for Phase 2, meaning that an OSP’s transition to Phase 1 must be completed before the implementation period can start for Phase 2 for a particular requesting 911 Authority.”¹² The Commission further explains that when an OSP has not yet implemented Phase 1, the six months to implement the Phase 2 request “would begin on the date of its Phase 1 compliance deadline or when it complies with the Phase 1 requirements, whichever is earlier, rather than on the earlier date when the Phase 2 request was issued.”¹³

As allowed in the Commission’s NG911 Order, the Department and AT&T mutually agreed to an extension of the Phase 1 deadline to March 31, 2026,¹⁴ such that March 31, 2026

¹¹ *Facilitating Implementation of Next Generation 911 Services (NG911)*, Report and Order, PS Docket No. 21-479, 39 FCC Rcd 8137 (2024) (“*NG911 Transition Order*”), ¶114.

¹² *Id.*, ¶123.

¹³ *Id.*, ¶124.

¹⁴ *AT&T Mutual Extension Notifications*, PS Docket No. 25-145, filed Oct. 3, 2025.

became the “Phase 1 compliance deadline”. The Department submitted its Phase 2 request prior to the Phase 1 compliance deadline,¹⁵ so AT&T has six months from the earlier of March 31, 2026, or the date it implemented Phase 1 to implement Phase 2 NG911. AT&T currently believes it will be able to implement Phase 2 NG911 for the Department on or before September 30, 2026, provided that the Department or its vendor provides it with the required information needed to do so and fulfills its Phase 2 requirements.

D. The Commission Recognized There May Initial Implementations Delays and Should Grant This Waiver As AT&T Meets the Requisite Standard

In establishing the default deadlines for transition to NG911, commenters suggested that the Commission should establish different timelines for “first-time” transitions by OSPs. While recognizing that difficulties may arise with the first implementations, the Commission instead found that its rules provide “ample flexibility for OSPs and 911 Authorities to address these issues”¹⁶ by allowing 911 Authorities and OSPs to “mutually agree on implementation deadlines that are different from the default compliance deadlines”.¹⁷ The Commission “encourage[d] OSPs to communicate with 911 Authorities if they experience situations that may warrant alternate agreements.”¹⁸ The Commission also specifically “encourage[d] 911 Authorities to collaborate with OSPs that are connecting to ESInets and NG911 vendors in the first instance”¹⁹ while also pointing to its waiver process to providers “facing extraordinary circumstances.”²⁰

¹⁸ *Id.*, ¶130.

¹⁹ *Id.*, ¶127.

²⁰ *Id.*

AT&T has encountered the obstacles described herein in implementing its solution for NG911 Phase 1 for its legacy Wireline services. In addition to the company-specific challenges and operational issues described herein, the challenges regarding MLTS subscribers are not unique to AT&T and may affect others as well in the ultimate transition to NG911. For these reasons, AT&T requests a waiver for NG911 Phase 1 implementation for the 911 Authorities in Attachment A (“Affected 911 Authorities”) until either September 30, 2026, or February 28, 2027.

AT&T has contacted each of the Affected 911 Authorities on multiple occasions. In each case, it explained the difficulties it has encountered in implementing NG911 for its legacy Wireline service and requested an extension. While our outreach continues, AT&T has included in this Waiver Petition those 911 Authorities that have not agreed to an extension for the time period that AT&T estimates is needed to complete its implementation of NG911 Phase 1 but excluded from its request any 911 Authority with whom it is actively engaged in extension discussions or the 911 Authority has indicated a further extension may be granted in the future.

AT&T’s limited waiver request is consistent with the Commission’s well-established precedent for waivers in specific cases when special circumstances warrant a deviation from the general rule, and such deviation will serve the public interest.²¹ The Commission may take into account considerations of hardship, equity, or more effective implementation of overall policy on an individual basis.²²

AT&T is facing the very circumstances that the Commission sought to accommodate through waiver requests in its NG911 Transition Order. AT&T has been working diligently to

²¹ 47 C.F.R. §1.3; *Northeast Cellular Telephone Co., L.P. v. FCC*, 897 F.2d 1164, 1166 (D.C. Cir. 1990).

²² *WAIT Radio v. FCC*, 418 F.2d 1153, 1159 (D.C. Cir. 1969).

implement Phase 1 NG911 requests across all of its applicable services and has done so in a timely manner for the services representing the vast majority of the 911 traffic that originates on its network. However, AT&T has encountered numerous technical and operational challenges in the initial implementation of NG911 Phase 1 for its legacy Wireline service and is seeking a narrowly tailored, time limited waiver for those areas in which AT&T has not secured an extension from the 911 Authority.

E. CONCLUSION

For the foregoing reasons, the Commission should grant AT&T's request for the limited relief as described herein.

Respectfully submitted,

AT&T SERVICES, INC.

AFFIDAVIT OF SUSANNA BIANCHERI

I, Susanna Biancheri, hereby state as follows:

1. I am currently Vice President of the AT&T Strategic Program Office and have had that position or other positions within AT&T since 1989.
2. The purpose of my declaration is to confirm the accuracy of the information contained in the AT&T Petition for Waiver of the Commission's Next Generation 911 Rules for Phase 1 (AT&T Petition). Specifically, my declaration relates to AT&T's NG911 implementation efforts for its legacy TDM (Time Division Multiplexed) service where it operates as an incumbent location exchange company (ILEC) and competitive location exchange company (CLEC).
3. I have reviewed the information in the AT&T Petition and declare that the information contained therein is true and correct to the best of my knowledge and belief, based on information available to me.

Executed this 31 day of August, in Dallas, Texas.

Susanna Biancheri
