Re: *Facilitating Implementation of Next Generation 9-1-1 Services (NG911)*, PS Docket No. 21-479; *Commonwealth of Massachusetts State 911 Department Phase 1 Request of April 4, 2025*, PS Docket No. 25-143
Letter Supplement to Verizon Petition for Waiver of April 17, 2026

Dear Ms. Dortch:

Verizon's above-referenced Petition for Waiver seeks an extension of the wireline Phase 1 deployment date through June 30, 2026 or July 31, 2026 (depending on the jurisdiction) in order to afford enterprise customers that use PS/ALI for their MLTS systems a meaningful period to implement the address database updates necessary to continue to route 911 calls and deliver dispatchable location information to the appropriate PSAP. The Petition briefly described Verizon's underlying outreach efforts to educate external stakeholders on how to implement those updates. (*See* Petition at 8 n.13.) This letter provides an update of those outreach efforts, including efforts to communicate directly with potentially affected enterprise voice dial tone customers.

Over the last several weeks Verizon has briefed representatives of APCO, NASNA, and NENA, the principal trade associations representing the nation's 911 Authorities, on the challenges NG911 implementation may pose for MLTS. Verizon has also engaged the ATIS Emergency Services Interconnection Forum (ATIS ESIF) to update the NG911 Checklist service providers utilize for NG911 deployment. Verizon has also shared its experience with the NGCS providers with whom it is engaged (or will be engaged) in establishing Phase 1 and 2 connectivity. Verizon has also briefed representatives of the major wireline OSPs most likely to encounter PS/ALI challenges, reached out via email to all 911 Authorities with a valid Phase 1 request as of mid-March, and directly briefed several state- and county-level 911 Authorities on the issue at their request. Through those efforts several jurisdictions have mutually agreed to extension dates that align with the Petition's. And we have confirmed other jurisdictions where the PS/ALI issue is not present for Verizon's wireline OSP operations, which in turn has helped establish an implementation schedule that will minimize impacts on those users.

Internally, prior to initiating the customer outreach, Verizon established a process for the intake of affected users' PS/ALI data. This process was developed, tested, and has been utilized successfully. Verizon has also communicated directly with all relevant known or suspected PS/ALI users in its own customer base. Internally, the issue has been communicated to relevant account teams and the issue will be reinforced every two weeks for the foreseeable future.

Please contact me if there are questions concerning this filing.
